Title	Supporting Evidence
Type	Web
Include files	PFE1287136_Response_Redacted.pdf PFE1287136_Floodrisk_Redacted.pdf

<p>Redacted comment on supporting documents - Please give details of why you consider any of the evidence not to be legally compliant, is unsound or fails to comply with the duty to co-operate. Please be as precise as possible.</p>	<p>The Hanging Chadder site was allocated in the GMSF (as GMA 17) . The Strategic Flood Risk Assessment found that Hanging Chadder was in Flood Zone 1, with 2.98 percent of the site at low risk of surface water flooding, 1.38 percent at risk of medium flooding, and 0.51% at high risk, placing it under Strategic Recommendation D. Because the assessment concluded that the flood risk was 'not considered significant' the strategic recommendation was that development could be permitted subject to a site-specific FRA.</p> <p>However, we do not believe that the findings of the SFRA reflected the true level of flood risk. Residents of Grasmere Road and Firbank primary school (on the Southern border of the site) have been plagued by surface water run-off from Hanging Chadder for years and a flood mitigation scheme was proposed in 2016. In December 2017, Unity Partnership (acting on behalf of Oldham Metropolitan Borough Council) successfully applied for a grant from the Environment Agency to finance a drainage study to produce a business case to 'significantly reduce surface water flooding risk to residents of Grasmere'. The Environment Agency agreed to commit £49,000 to the study, with United Utilities and OMBC each committing £6,000, for a total of £61,000. The purpose of the study was to investigate the surface water flooding issues with the aim of identifying flood mitigation measures, and implementing a drainage solution in 2019. As of February 2021 the study had not been completed.</p> <p>In its grant application to the Environment Agency, Unity Partnership concluded that Grasmere would still be at risk of surface water flooding and the distress to residents caused by recent flooding events would likely increase, if the situation were not addressed. It is not only reasonable to conclude that there is a risk of surface water flooding, there is actual documented evidence of such events. Therefore the assessment that the risk of surface water flooding is not considered "significant" is demonstrably incorrect.</p> <p>OMBC did not disclose this during the previous Regulation 18 GMSF consultation, thereby withholding relevant and important information from the public about the flood risk and the deliverability of the site. By not disclosing this information we believe OMBC was not open and honest in its actions, and therefore not compliant with its Statement of Community Involvement, and consequently the Regulation 18 consultation in 2019 was not legally compliant per Planning and Compulsory Purchase Act 2004 (para. 19[3]).</p> <p>OMBC should be instructed to disclose any further information that they have in their possession that could potentially impact on the flood risk assessments for any of the sites they have allocated. If it is revealed that the SFRA is not indicative of the true flood risk then either i) the strategic flood risk assessment should be amended accordingly; ii) the site should be withdrawn from the plan; or iii) a site-specific flood risk assessment should be carried out prior to re-designation of the Green Belt boundary. Sites should not be removed from the Green Belt if they are not prima facie developable, Further background is provided in our supplementary paper "Flooding information pack for Hanging Chadder".</p>
